

Questionmark Technology Partner Solutions

Questionmark™ Perception™ Blackboard Connector

Overview

Blackboard's expertise in course management and Questionmark's expertise in computerized assessment make a powerful combination. When educators have the flexibility to choose and integrate best-of-breed applications, they can provide students a more compelling and effective learning experience.

Questionmark's Blackboard Connector enables students and educators using Blackboard version 6.0 or higher to seamlessly link to Questionmark™ Perception™ assessments.

How it works

The Blackboard Connector is a software bridge integrating Questionmark Perception with the Blackboard Learning System, enabling organizations to take advantage of Perception's assessment authoring, delivery and reporting technology in concert with the Blackboard Learning System's user, course, content and grade management features.

- Instructors using Blackboard can link their courses to Perception for quizzes, course evaluations, and secure delivery of exams. The connector adds an interface to Blackboard that instructors may use to schedule an assessment for delivery via Perception. The instructor may specify which dates an assessment is available to a student, and limit the number of attempts the student may try access the assessment.
- Students may link to Perception assessments from within Blackboard and view their results in Blackboard's Gradebook. The connector also enables students to view Perception's coaching report within Blackboard, providing students with a detailed view of their results, including their scores and answers for each question.

The connector uses Blackboard's 'Building Block' technology to integrate the Blackboard Learning System versions 6.x and higher with the latest version of Questionmark Perception.

Blackboard Connector offers:

- A streamlined integration between Blackboard (v6.x and 7) and Questionmark™ Perception™
- Instructors can easily assign and schedule Perception assessments for their courses.
- Institutions using Blackboard can take full advantage of the powerful and innovative assessment management features offered by Perception such as Questionmark Secure, which provides secure delivery of high-stakes exams and can minimize cheating by "locking down" the participant's PC, preventing task-switching, printing, screen captures, and more.
- Instructors who need comprehensive question types, such as drag-and-drop and hot-spot, with a pedagogical focus, can provide all styles of assessments within their course.
- Students registered in Blackboard can seamlessly link to Perception quizzes and tests.
- Perception's Coaching Report helps students climb the learning curve faster by providing detailed overview of their performance on assessments.
- Instructors can access Perception's full range of reporting features, including Item Analysis, Question Statistics, and more.

Technical Requirements

- Questionmark Perception 4.2 or higher
- Blackboard Learning System 6.x or 7
