

Questionmark™ Perception™

Measure Knowledge, Skills and Attitudes Securely for Certification, Regulatory Compliance and successful Learning Outcomes

Assessment Management System

Author, Schedule, Deliver and Report on Surveys, Quizzes, Tests and Exams.

The Questionmark™ Perception™ assessment management system enables learning and testing professionals to author, schedule, deliver, and report on surveys, quizzes, tests and exams. Perception is available for licensed, on-premise deployment or as an on-demand solution and can be integrated with other systems. Questionmark supports major standards including IMS QTI, AICC, SCORM and HR-XML.

Distributed Authoring

You can author questions using wizards in a Windows environment and then store and edit them with local or shared (remote) repositories. The authoring wizards make it easy to create 22 different types of questions. It is easy to assemble and publish assessments from the questions you have created.

Blended Delivery

Perception delivers assessments online to standard or secure web browsers and to mobile devices such as smart phones and PDAs. Perception also enables printing and scanning of assessments, centralising management of both online and paper-delivered tests. Assessment delivery options allow questions and choices to be shuffled, and for participants to receive helpful feedback at item, topic, or assessment level. Options for high-stakes assessment delivery include secure browser, proctoring security and test center management.

Translation Management

Questionmark's Translation Management System, an optional component of Perception, helps test publishers, businesses and other organisations that need to deliver assessments in multiple languages by streamlining the translation, management and delivery of localised content to multinational workforces.

Scheduling

Perception enables administrators to define schedules appropriate for the stakes of each particular assessment, group or individual. When scheduling assessments you can: limit dates and number of attempts; require proctor/invigilator log-in; email broadcast schedules to participants; and many more options.

Reporting and Analytics

Perception offers twelve pre-defined reports that enable you to analyse and share results with stakeholders. Use Perception to understand:

- What did participants learn from the course?
- Are my questions valid and reliable?
- What did participants think of the learning experience?
- How do I coach test takers to improve performance?

Many additional analytics are available. Results can be exported to Excel & CSV for custom reporting.

Accessibility

Perception assessments delivered online are optimised for screen-reader compatibility and support navigation using the keyboard or alternate pointing devices. Participants can easily toggle text size and contrast controls in online assessments.

System Requirements

Perception Authoring Manager: PC with Windows 7, Vista, XP; Windows Server 2008, 2003 *Perception Server:* Windows 2003 or 2008 Server and: Oracle 9i, 10g or 11g; or Microsoft SQL 2005 and 2008. (or SQL Express for tryout)
