

## Questionmark Scoring Tool

Using customized rubrics to enhance the grading of essays

### Overview

The Questionmark Scoring Tool enables educators and trainers to annotate and grade essay questions within assessments by using customized rubrics.

### How It Works

The Questionmark Scoring Tool helps both individual and multiple graders maintain consistency in marking constructed answers. This is achieved by using the Scoring Tool to define rubrics, or scoring rules, for each question. For example, the rubric for a history essay might assign points to grammar, spelling, persuasiveness and quality of research.

### Using the Scoring Tool with Questionmark™ Perception™

The Scoring Tool is accessed as a separate application from Questionmark Perception testing and assessment software. However, answer data from the Scoring Tool can be stored within Perception and analyzed for the production of comprehensive statistical reports.

### Technical Requirements

- Perception 3.4.3 or higher
- Windows 2000 Server or Windows 2003 Server
- Perception database must be SQL Server or Oracle (not MS Access)

### The Scoring Tool Offers:

- In-line grader's annotations as well as overall comments
- Up to 12 scoring dimensions within each rubric
- Individual scoring comments for each dimension of the rubric
- Automated, customized, template-driven emails relaying scores and comments to participants
- The ability to assign different rubrics to the same question, depending on how the question is used
