Printing and Scanning

Questionmark's printing and scanning solution enables you to author assessments that your participants can take online AND on paper. Responses can then be scanned, uploaded and scored, and become available for reporting along with results from your online assessments. It works with just about any scanner. So you can print and scan your own bubble sheets—meaning there's no expensive hardware or forms to buy.

Print from Questionmark

An "assessment snapshot' is created, generating a HTML version of an assessment ready for printing. A bubble sheet format is selected and customized.

Deliver on paper

Participants then take their assessments and submit their responses by marking their bubble sheets.

Scan and upload

Next, the bubble sheets are scanned, and the response data is read by the scanning software which produces an assessment data file. Data from this file is uploaded to the Questionmark database.

Report on results

Responses are scored and available for reporting and analysis along with results from assessments delivered online.

Benefits

- Authoring and item banking in Questionmark
- Blended assessment delivery
- Quick, comprehensive reports
- Deliver on paper and/or online with single results set for analysis
- Compatibility with many scanning systems

Supported Question Types

- Multiple Choice
- Multiple Response
- True/False
- Likert
- Yes/No
