Seamlessly Integrate Questionmark

Flexible and secure options for SSO, LMS integration and more

There are a number of ways to seamlessly integrate Questionmark's assessment management system with your other key enterprise systems.

Publish to LMS

Using Questionmark Publish to LMS, administrators create SCORM, AICC or IMS content package files that can be imported into learning management systems such as SAP SuccessFactors, Cornerstone OnDemand (and many others) so that Questionmark assessments can be scheduled or launched by these other systems.

LTI Connector

The LTI Connector integrates Questionmark OnDemand with learning management systems such as Blackboard, Moodle, D2L and Canvas (and many others) that support the IMS Learning Tools for Interoperability standard.

Participant Results Analysis

- Questionmark assessments can be scheduled from within the LMS environment
- Students can be authenticated and launch Questionmark assessments from within the LMS
- Scores are passed back to the LMS after an assessment has been completed

Single Sign-on (SSO) via SAML

Using SAML-based single sign-on (SSO) with Questionmark OnDemand enables assessment participants, item and assessment authors, reporting users and even administrators to be authenticated against your IDP, created "on the fly" in your OnDemand area and even assigned roles based on a SAML attribute.

This standards-based integration option benefits organizations with:

- Streamlined user access
- Reduced "password fatigue"
- Efficient, centralized user management
- Enhanced security

Questionmark APIs

Questionmark's Application Programming Interfaces (APIs) allow rich integrations between Questionmark technologies and third-party applications.

QMWISe, Questionmark's web services API, enables registration, management, and reporting systems to tightly integrate with Questionmark.

Questionmark's **Results API** enables customers to use third-party business intelligence (BI) applications such **Microsoft PowerBI** or **SAP Business Objects** to securely access and analyze results.

Assessment Solutions

Measuring Learning Results
- Measure knowledge, skills & attitudes before, during and after learning
- Increase knowledge retention

Learn

Compliance and Safety
- Verify knowledge of laws, regulatory requirements and health & safety
- Demonstrate compliance; reduce risk

Do

Qualification and Safety
- Ensure reliability and validity of results for certifying knowledge and skills

Knowledge and Skills Verification
- Ensure skills and technical expertise
- Increase productivity and decrease costs
