

Performance-based Testing

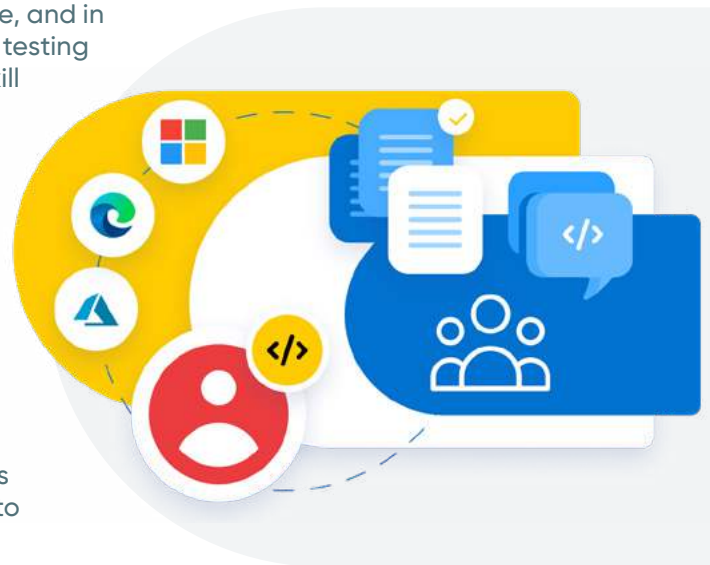

Assess practical IT skills in authentic lab environments

With Questionmark's performance-based testing functionality, IT and software professionals can be assessed in an authentic, efficient and valid way via practical tests within lab environments.

Designed to work in harmony with companies like Skillable, and in conjunction with other test formats, performance-based testing with Questionmark can offer the next step in authentic skill assessments.

The Benefits of Performance-based Testing with Questionmark

- **Authentic lab environments for accurate skill assessment:** assess practical skills accurately and make more informed decisions about employees and candidates.
- **Protect against test fraud:** while not impossible, the ability to commit test fraud via performance testing is much more difficult, adding an extra layer of validity to test results.
- **Scale your organization:** build and scale your performance testing alongside other assessment types in one easy-to-use platform.
- **Manage tests with ease:** easily schedule, track and report on lab-based assessments.
- **Grow and globalize:** deliver anywhere, without the need for physical test centers, including in new markets across the globe.
- **Enjoy high-value certifications:** offer higher value credentialing and certifications with well-designed and high-fidelity performance tests that show not only if a candidate has the appropriate knowledge but if they also can apply that knowledge in a real-world setting.
